

GENFUEL®

THE 1MW ELECTROLYZER **Best-in-class stack life expectancy of** **80,000 hours**

The GenFuel 1MW proton exchange membrane (PEM) electrolyzer system provides up to 1MW of on-site hydrogen for markets including heavy industry, e-mobility and energy storage. Electrolyzers generate hydrogen from water using electricity and a special membrane and “green” hydrogen is generated by using renewable energy inputs, such as solar or wind power. The 1MW product is based on 47+ years of experience in design, production and sales of electrolyzer stacks and integrated products.

- Flexible & Scalable to meet a wide array of performance requirements
- Robust & Dependable, providing industry-leading performance
- Turnkey 1MW containerized system for simple siting and installation
- Environmentally-friendly, with lowest O&M in its class
- World class lifetimes with stable operating voltages

Your full-service hydrogen generation system.
